STYLEX

Model: Brooks
*Refer to P.2 for model variations

Tools Required

safetly glasses
mallet
phillips screwdriver
prybar/flathead screwdriver
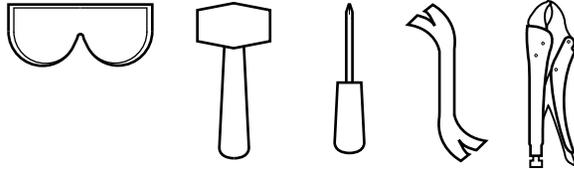

Breakdown Steps

1. Use a mallet to tap on the bottom of plastic seat back. Seat back should slide up and off of screws (figure A). After the back is removed, use a screw driver to unscrew the shoulder screws from the back.

2. Turn chair frame on its side to reveal leg cap glides inserted into the bottom of the leg. To remove, use a pair of vice grips to clamp onto the revealed plastic. Use a mallet to tap the cap guide out of the chair leg (figure B). Repeat for each leg.

3. Keeping the seat upside down, use a pry bar to remove the seat pan from the bottom of the frame (figure C). Seat pan should pop out relatively easily.

4. To remove the seat, keep the frame upside down and unscrew the four screws holding the seat in place (figure D).
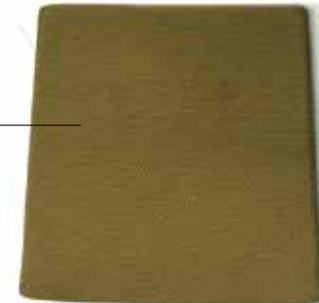

- Back
- Material: G.F. HDPE plastic ♲
  *Plywood variation see P2.

- Phillips round-head (¼ 20 bolt) x4
- Material: Steel ♲

Chair Variations

Brooks
All versions of the brooks chair have the option of having no arms or having arms. All other variations are with material use.

- Fully upholstered seat and back cast aluminum arms(figure A1).
- HDPE seat and back with nylon arms (figure A2).
- Plywood seat and back with no arms (figure A3).

Disassembly for all of these versions is the same as the original. Please use P1 as a disassembly reference for all of these variations.
